Hi Todd,

Our next scheduled rule is for April 2014, if we could get a letter within the next week to 10 days we would likely be able to make the April rule. The next scheduled rulemaking would be August/September 2014 (typically we need the governor's letter 6 - 8 weeks prior to rule making). These are target dates and often shift a few weeks. The package for Delta Shipyards is complete and EPA is ready to propose once we receive State concurrence. An RI/FS has not yet been conducted at this site, so it is difficult to estimate a remedial cost. During the removal assessment a cost estimate was developed for the removal of the pits only and ranges from 1.2 to 5 million dollars dependent on the remedy selected. This would not include addressing any ground water impacts or off-site migration. A viable responsible party has been identified and EPA would exhaust enforcement authorities prior to addressing this site as a fund lead site.

Hey Brenda

The secretary of the dept is looking at the letter of intent to list, but she had a few questions that she conveyed to my administrator (by the Gary Fulton is detailed as our administrator).

If you could answer the questions below we would truly appreciate it.

Thanks Todd

Do you have or does EPA have an estimate for cleanup costs? Also when is the next deadline for EPA (to get it in the Federal Register)?
